# How to install real debrid on my firestick

Continue

Sick of buffering issues when playing High Quality Streams? This can be caused by your ISP's throttling, but can also be caused by links to overloaded servers hosting the streams. In the latter case, the solution is to use the Real Debrid service together with your streaming applications. This is a Guide on Real Debrid for Beginners... If you love streaming online, and especially if you use Kodi, you may have noticed that one of the most common issues is finding high-quality streams that don't have buffering problems. This applies even to the most popular free streaming websites, apps, and Kodi addons. If you wish to solve the issue, then one of the best solutions is Real Debrid. In this guide, we'll tell you everything you need to know about the service and show you how to install Real Debrid on Kodi. What is Real-Debrid? Real Debrid is not an addon, but rather a multi-hosting service that enhances your streaming experience by providing unrestricted streaming and downloading service. It is the most popular multi hoster, and its main service is to provide multiple HD streaming sources that you won't get on any Kodi addon. The tool works with almost all the popular addons. Real Debrid gets these links from a total of 56 supported hosts. The difference between RD links and the regular links you get on Kodi is that these ones are not commonly used like the ones Kodi addons can scrape from the internet. Instead, they are hosted on high-bandwidth servers, which makes your streams faster and more stable. This ensures that you get a seamless streaming experience. Getting Started with Real Debrid To use Real Debrid, you need to sign up for an account first. From there, you can then enjoy links from hosters such as Mega, Big4Shared, Filefactory, etc. Is there a Free Real Debrid Account? For many years, Real Debrid has been offering users a limited free plan. With this plan, you would still get some of the service's features, but the time of use would be restricted to between 6 AM and 12 PM Central European Time. Unfortunately, this plan was recently discontinued. The team states that: "Our service is not free because it costs us a lot of money. Quality is our priority, we must ensure a maximum download speed even during peak hours through our various servers to satisfy everyone. Hoster's Premium accounts or traffic agreements can not be paid with advertising." To use Real-Debrid, you now have to upgrade to a Premium package. From there, you will be able to enjoy: High-speed downloads of up to 1000Mbps HTML5 Streaming (No plugin needed) No waiting times or advertising Firefox, Chrome and Jdownloader Plugins DLC, RSDF and CCF decrypter Parallel downloads (2) Unlimited Traffic (4) Support for download accelerators Multiple hosters on a single website (3) AES Secure Downloads Signing up for an account on Real Debrid To use Real-Debrid, you need to sign up for an account. You won't need to provide a payment method to create one. Visit and click the "Sign up" option on the wrong side of the law; StrongVPN offers you an excellent option to do so. Hope you liked this article on Real Debrid address. Fill in the form. You will now get an Account Activation email asking you to confirm registration. Just click the link in the email, and you're ready to use the Sign up one. To upgrade to premium, you can choose either of the packages offered. The only difference between the various packages offered is the subscription duration and the fidelity points you get. Here are the plans: 15 Days: 3 Euros (roughly USD 3.38). You get 150 Fidelity points 30 Days: 4 Euros (roughly USD 4.51). You get 2000 Fidelity points 90 Days: 9 Euros (roughly USD 10.14). You get 450 fidelity points 180 Days: 16 Euros (roughly USD 18.02). You get 00 Fidelity points Note: The USD rates given above were calculated at the time of writing, and so the values may vary. The fidelity points you get can be redeemed to get additional access. For example, 1,000 fidelity points can be used to get month-long free premium access. Important: Stream privately & anonymously Streaming on Kodi as well as various third-party applications has been getting a lot of attention lately. This is because third-party apps and addons provide users with illegal streams of copyrighted content. Thousands of users have ended up receiving DMCA notices and/ or even having their connections throttled by the ISP for streaming such content. It is therefore very important to make sure that whenever you want to stream online, you have the privacy, security, and anonymity of a reliable VPN like StrongVPN . This is one of the fastest VPNs for streaming, and so it will still let you enjoy HD and 4K content with an extra layer of privacy and security. Note that even though Real-Debrid has a premium package that requires you to pay, they do not host the files made available by their service. This way, the service absolves itself from any legal liability, and so you have to take care of your own security. To help you get started, we have a special price for BestDroidPlayer readers. Get it from StrongVPN, now! Setting up Real Debrid on Kodi Kodi has become the go-to platform for the ultimate home entertainment. This is mainly because of the software's flexibility as well as compatibility. With Real Debrid set up on Kodi, your favorite streaming addon will now feature Real Debrid streams. Here's how to set up Real Debrid on Kodi. On your Kodi home screen, click the settings icon. It's on the top left side of the screen and looks like a cog. In the system page that opens, Click "System " On the bottom left side of the screen, there's a button either written Basic, Standard, Advanced or Expert. Click until it changes to Advanced. Hover over the Addons menu and click Manage dependencies. Now, scroll down till you find URL Resolver. Click on it. Click the Configure button Highlight Universal Resolvers and scroll down to the section named Real-Debrid. Change Priority from 100 to 90 and click Done. Click the OK button Click the Configure button once more. Highlight Universal Resolvers and scroll down to the section named Real-Debrid once more. Click (Re)Authorize My Account. Wait on the same screen. Write down the code that appears in the window Now, open in a browser & type in the provided authorization code. The "URLResolver Real-Debrid Resolver Authorized message will appear after typing in the code. Almost all the best Kodi addons support the tool, and so Real Debrid sources should now be available on Kodi. To test the functionality of Real Debrid, let's use the Exodus Kodi addon and try to stream an episode. Here are the available links without Real Debrid. After configuring Real Debrid, we now have extra 720p and 1080p streams! Real Debrid streams are marked with an "RD." Select the quality and host you want and enjoy. How else can I use Real Debrid? Though Real Debrid is most common among the Kodi community, there are still other ways of enjoying the service. This is especially if you want to download a file, rather than stream it. Downloading a Real Debrid File The easiest way of downloading a Real Debrid file will still require you to use Kodi. Whenever you stream any RD link on Kodi, it will be added to your history. After that, you can head back to the RD website, log in, and view your history. You will get a download option besides the name of the file you have streamed on Kodi. You can also download the Real Debrid Android app on Play Store if you wish to download the file to your Smartphone or Android box. Note: Streaming for just a few seconds will be enough for the file to be added to your history. Convert Torrents to Direct Links Real Debrid allows you to convert a torrent link to a direct link. You just need to copy the magnet link from a torrent site and then paste it on the Real Debrid's Torrent page. The website will then convert the file and give you a direct link. You then use this link to download your file with a download manager like IDM. If the torrent you want to convert is already in the Real Debrid seedbox, it will be converted instantly and made available for download. Wrap up Real Debrid can take your home entertainment to another level by providing you with high-quality streams and letting you stream or download with maximum speeds. With an account, you won't have to worry anymore about buffering issues or low-quality content. However, always remember to hide your online activities, before ending up in the wrong side of the law; StrongVPN offers you an excellent option to do so. Hope you liked this article on Real Debrid for Beginners, a Guide to help you start with. Have a nice day! Installing Kodi on Firestick opens up a new world of streaming possibilities as you will be able to stream anything online, from classic movies and documentaries to live sports and the latest blockbusters. While the "vanilla" Amazon Firestick provides loads of streaming possibilities thanks to the hundreds of apps available on the store, this simply doesn't cut it as these apps don't really speak the "free and unrestricted" language that is music to the ears of most streamers. However, the streaming platform and media center is not yet available on the Amazon Fire Store, and we don't see it coming any time soon either. This shortcoming has led many Firestick users to look for ways to "jailbreak Firestick," often done through Kodi.In this guide, we'll show you the easiest – and safest – way to install the latest version of Kodi on Firestick (Kodi 19.4 Matrix), a method that also works on the Fire TV Cube. We'll also explore three alternative installation methods, how to configure the app for streaming, and how to use ExpressVPN to stay hidden.If you are in a hurry, here's how you can get Kodi running in a few steps:Install DownloaderAllow Unknown SourcesDownload Kodi through DownloaderInstall Kodi when promptedTurn on your VPNExplore the new possibilities!Installing Kodi 19.4 on Firestick is done through a method referred to as sideloading. This is simply the process of installing apps that are not available on the official store, and it normally requires a few steps.Government and ISPs constantly monitor your online activity and can basically see whatever you do online. That includes all cases in which you'd access copyrighted material, even on your Firestick.Now currently, your IP is visible to everyone.I order to keep whatever you do online hidden from them, you should definitely use a VPN to mask your online behavior.I personally use ExpressVPN, which is the fastest and most secure VPN. It is straightforward to install on any device, including Amazon FireStick. You get 3-months free and save 49% on its annual plans. Also, it comes with a 30-day money-back guarantee. If you are not satisfied, you can always ask for a refund.Click HERE to get 3-months free and save 49% on ExpressVPNDownloader is an app that facilitates the entire process of downloading and installing third-party apps. The app is available on the official store, so users can install it in a few minutes.At the home screen of your Firestick, go to Find and then click Search. On the window that opens, start typing Downloader, then choose from the search suggestions to find the app. Downloader should now display as the first option. Click it . Click Download to install the app on your device. This step involves setting up your device to allow Downloader and other apps to install third-party apps. You may also need to maximize privacy by preventing Amazon from spying on you.To do this:Go back to the home screen. Select Settings, then click My Fire TV.Select Developer options.Now, if you are using Firestick Gen 2, Firestick 4K, or Fire TV Cube, you can allow all sources to install apps by simply clicking Apps from Unknown Sources to turn it on. Then accepting the pop-up by clicking Turn On.If you are using Firestick Lite or Firestick Gen 3, you'll need to give permission to Downloader specifically. Click Apps from Unknown Sources, select Downloader, and accept the prompt to change the state below Downloader by switching it to On.Your device should now allow you to install third-party apps.By default, Amazon collects data on how you use your device and the various apps you have installed. You can turn off this setting through two functionalities. The first is "Device Usage Data," which collects personal data for marketing and product improvement. The information collected is used to customize marketing information for you. The second is "App Usage Data," which collects data to determine the frequency and usage duration of particular apps. When you leave both of these turned on, you allow Amazon to analyze your data, which also consumes your bandwidth and processing power.If this sounds invasive to you (it?), go back to settings then.Click PreferencesSelect Privacy Settings Turn off "Device Usage Data" and "Collect App Usage Data." That should stop big brother from spying on you.Now that everything is set, we can go ahead and install Kodi 19.4.Go to Applications and open Downloader. If you are opening it for the first time, you'll need to give it permission to access the device storage.Now, type in the URL bar and click OK.The webpage should open. Scroll down to the "Select your Platform" section and select Android.Choose the ARMV7A (32-bit) version as it works well with all Firestick and Fire TV Cube versions.Kodi should start downloading.After the download is complete, you'll be prompted to install the app. Click Install.After the installation, click Done Downloader should now give you the option to delete the downloaded file and save space. Click Delete and confirm the action.Kodi should now be the last app in your applications folder. If you wish to move it, highlight it, then click the menu button on your remote. This will give you several options. Click Move. From there, drag the app to where you'd like it and click Ok.You can now open Kodi. On the first launch, the app will notify you that it requires access to your device media and files to function then ask you for storage permission, which you can grant by clicking allow. Kodi 19.4 should now launch.Once you install Kodi on Firestick, you will realize that the app doesn't provide any content. All you can do with Kodi in its original state is organize and stream content that you own.However, you can set up the program to let you stream pretty much everything on the internet. This is done by installing Kodi addons. Kodi addons are small programs that enable Kodi to access online content by scraping for links from the internet and then neatly organizing them according to the type of content.These addons are grouped into two categories:Official Kodi AddonsThird-Party Kodi AddonsOfficial Kodi addons are addons that have been approved by the XBMC foundation, the group behind Kodi. These addons do not in any way facilitate copyright infringement, and they can be installed from the official Kodi repository (all addons are housed in containers known as repositories).Third-Party Kodi addons are developed by thousands of independent developers and have not been approved by Kodi as official addons. This can be because they have not yet been submitted or facilitate the streaming of legally questionable content.Unofficial Kodi addons are the popular of the two types as they provide access to unrestricted content. Installing such addons on Kodi to bypass streaming restrictions is what is generally referred to as jailbreaking Firestick. However, if you decide to use any third-party Kodi addon, you should do so privately and anonymously. We'll show you how to use ExpressVPN to stay hidden.To start using Kodi, you need to choose the addons that you will install. Most of them specialize in either Sports, Live TV, or Movies & TV Shows. A few specialize in other niches such as gaming, and others offer pretty much everything.Official Kodi addons can be installed from within Kodi using a process similar to step 4 in this section. However, to install third-party addons, you'll first need to install the repository that hosts the addon. This will require you to enable unknown sources (used to this by now, huh?), install the addon's host repository, and then install the addon from the repository.In this guide, we'll install Asgard Kodi Addon, an all-in-one addon hosted by the Narcacist Repo. You will also be able to install other addons hosted by the same repo.This only needs to be done once, and it only requires three steps:While at the Kodi homepage, open Settings by clicking the cog button on the top left side. While on the system page, select System. Hover over Addons and enable Unknown Sources by toggling the button beside it. Accept the warning. Your Kodi app can now install repositories from third-party sources.Every Kodi repo has a source URL. For Narcacist Repo, it's �Go back to Kodi Settings and click File Manager. Click Add-Source. Now, type into the window that opens. To identify the repo, type Narcacist in the text box below that and then click OK. To install the repo, go back to the Kodi home screen. Click Add-ons from the left side menu options. Click the open box icon on the top left side. Select Install from Zip File. Kodi will warn you that addons installed through this method won't be updated automatically. Just accept by clicking OK. Select Narcacist. Click on repository.NarcacistWizard.zip. You will receive a notification when the repo installs successfully. Now, we can finally install Asgard.While on the same page, click Install from repository. Select Narcacist Wizard Repository. Select Video Add-ons and then click on Asgard. Click Install. Kodi will now show you the dependencies that it will install along with the addon. Just click OK. Asgard Kodi Addon will install, and Kodi will then notify you after the installation is complete. You can find the new addon on the Kodi home page under Addons. However, before you open it, it's crucial that you get your VPN up and running first.If you're still considering which Kodi addon to use, we've already done the research for you and listed our top recommendations in this article: Best Kodi AddonsKodi has been made popular by the thousands of third-party addons available on the internet. However, these addons are also the reason why Kodi is not available on the Amazon App Store. This is because the links they provide are not vetted, and the content is sometimes pirated.Your ISP can tell what you are accessing whenever you use such addons, and copyright trolls can also track you down. Further, some Kodi addons use torrent links, and ISPs in lots of countries block such content.Before you access anything on Kodi, you should install a reliable VPN such as ExpressVPN. This is the best VPN for streaming due to its excellent speeds and ability to bypass all restrictions. You can check our industry experts' updated review of this VPN service here: ExpressVPN Review. And here's how to set it up on Firestick.The first thing you need to do is create an account with the VPN service. Doing so is quite straightforward, and it only requires an email address and a payment method. Signing up for the VPN is risk-free as you will be protected with a no-questions-asked 100% money-back guarantee. If you are not satisfied with the service, you can ask for a refund within 30 days!ExpressVPN provides a Firestick app on the Amazon Store, so installing it is quite straightforward.At the home screen of your Firestick, go to Find and then click Search. On the tab that opens, type ExpressVPN and click the quick suggestion below to search for the app. The ExpressVPN app should now be displayed as the first option. Click it. Click Download, and the app will be installed on your deviceExpressVPN should now be available in your app gallery. Go ahead and open it.From there:You will be required to log in or create an account. Choose Sign In. Now, provide your email address and password. If you have not created an account yet, you can do so here. After you log in, Firestick will notify you that ExpressVPN will monitor your traffic. This is just because your traffic will be tunneled through their Network. In reality, you are hiding it from your ISP. Just click OK.. You can now secure your connection with just a single click! Instead of connecting to the suggested server, you can also choose one among the 194 locations available. There are also lots of features that you can explore, such as split tunneling, protocol selection, auto connection, and apps and website shortcuts. You can then connect to a server when you are satisfied with the settings.After hiding your online activities, you can now go back to Kodi and start streaming!Using Downloader is the easiest way to install the latest version of Kodi on Firestick, but it is not the only method. If, for whatever reason, it doesn't work for you or you'd like to use a different one, below are two alternate methods you can use.Note that all three methods will still require you to enable "Apps from Unknown Sources." You can follow the instructions under "Step 2: Prep your Firestick" to do so.File Explorer works pretty much like Downloader in terms of installing apps on Firestick. However, the app is much more than that as it is a fully-fledged file manager. You can explore it further after installing it, but here's how to install Kodi 19.4 using File Explorer.File Explorer is readily available on the Amazon Store. This means that you can install it within a few minutes, so go to Find> Search > File Explorer > Install. The process is the same as that of installing Downloader.If you are using Firestick Lite and Firestick Gen 3, you'll need to give File Explorer exclusive permission to install apps on your device. Just like with Downloader, head to Settings > My Fire TV > Developer Options > Apps from Unknown Sources > File Explorer.Open File Explorer and give the app permission to access your file storage system. From there:On the side menu, scroll down and click Tools, then Download Manager. Click New on the lower side. Unlike Downloader, File Explorer only uses direct download URLs. Enter the URL (Kodi 19.4 ARMV7A 32-bit). You don't need to enter a name as it will be automatically given. After that, click Download Now. The file will now be downloaded. After it's complete, you'll get an Open File option. Click it File Explorer will now give you several options. Click Install. Click Install once more. After the installation, click Done or Open. The app should now be available on your device.AppStarter requires a longer process than the previous two methods, but it provides the ability to update your Kodi to the latest version. This makes it one of the best ways to install the app on Firestick. The first thing you need to do is install Downloader or File Explorer using the procedures given above. For now, we'll use Downloader to install AppStarter, which we can then use to install and update Kodi.To allow Downloader to install AppStarter and other apps in the future, you'll need to enable "apps from unknown sources." This procedure is found under 'How to Install Kodi 19.4 on Firestick' Step 2.Now, we can go ahead and install Kodi 19.4.Go to Applications and open Downloader. If you are opening it for the first time, you'll be prompted to install the app. Click Install. After the installation, click Done. Downloader should now give you the option to delete the downloaded file and save space. Click Delete and confirm the action. AppStarter should now be available in your applications library.Launch AppStarter then:Select Updates on the side menu. You will see Kodi as an option. Click the Install button beside it. Kodi should start downloading. After the download is complete, you'll be prompted to install the app. Click Install. After the installation, you click Done or Open. The app should now be available on your device.Unlike mobile devices, jailbreaking Firestick simply means installing third-party apps that allow free streaming. Kodi is the app that is mostly associated with the term. Although Kodi is not available on the official store, installing it is completely legal. What matters is what you access and your local laws. But since you can't really determine the legality of everything you can access on Kodi, we highly advise that you turn on ExpressVPN before streaming anything on Kodi.Kodi can be deleted just like any other Firestick app. Go to Applications, highlight Kodi, and click the menu button. You'll get an option to uninstall the app. Whenever a new version of Kodi is released, you can update it using the same process as installing the app for the first time. If you used AppStarter, just open the app and use the update option.Installing Kodi on Firestick will help you maximize the power of the device and take your home entertainment to another level. You will be able to enjoy movies, shows, live TV, sports, documentaries, and more without worrying about any restrictions. The guide above should show you how to install and use the app as well as how to stream privately and anonymously.
